- Planning & approvals
- Design
- Construction
- Commissioning
- Operation

Introduction

babyHydro supports landowners and developers through every stage of creating electricity from running water.

- Scheme size ranging from 10kW to 500kW
- Specialising in 'low-impact' hydro – based on 'run-of-river' approaches and the use of weirs rather than large storage dams
- Access to unique Hydrobot site identification software
- Feeding into the Grid or for local consumption
- Part-DIY solutions possible for smaller projects

To explore how to generate value from the water flowing through your land please call Gordon Black on 07736 554276 or e-mail gordonblack@babyhydro.co.uk
